MODEL NUMBER NOMENCLATURE

MODEL: 42 MEL / MELD

MODEL: 42 MEH / MEHD

INTRODUCTION

Carrier fan coil units are the ideal solution for providing localized air conditioning to ensure comfortable temperatures in spaces of any size. The unit consists of a fan which passes air over a heating and cooling coil to condition the temperature of the space it serves.

Carrier fan coil unit's coil is supplied by the building's low pressure hot water & chilled water systems meaning that it can be installed anywhere where a water & electrical supply is available. The simple nature of the product's operation makes for easy and cost effective installation in new build or refurbished offices, schools, hotels, houses & apartments.

Carrier fan coil units are ideally suited for installation in chilled water or hot water applications to meet air conditioning requirements of individual rooms. Units are designed to address the need for greater reliability, guaranteed performance, quieter operation, low installation height and better indoor air quality.

Carrier fan coil units are easily installed and serviced. Fan coil units feature high operating

efficiency, low operating cost and quiet, energy efficient fan motors.

The main components of fan coil units are:

- Fan,
- Coil (Heat exchanger).
- Air Filter

The heat exchanger receives hot or cold water from a heating or cooling source. The fan spreads the heat or coolness in order to condition the space.

Features

- Cleaner, quieter and more efficient in design.
- Heavy gauge galvanized casing & fan housing
- Hi-efficiency forward curved fan for quiet operation.
- Hi-efficiency, low power consumption electric motor.
- Insulated heavy gauge drain pan.
- Quick electrical connections.
- Manual air vent on coil header**.
- Interchangeable control box location at sites**.
- Additional mounting holes for maintenance**.

*** Features are not applicable for Decorative ceiling type fan coil units.*

COMPUTER SELECTION (FCU Genius)

We have made available a computer program (FCU Genius) to finalize your selections. Please contact manufacturer's representative for a computer selection based on your "FCU Genius" the design parameters of your application.

Quality Assurance

Carrier fan coil units are tested in accordance with Eurovent standard. Each coil is factory tested for leakage at 350 psig air pressure with coil submerged in water. Factory is ISO-9001 certified.

[Carrier Eurovent-Certification web-link](#)

The information herein provides guidance on how the product should be selected, installed, operated and maintained. Qualified and Professional personnel should be used in all instances to determine exact methods of working using these instructions as a guide to good practice.

EC MOTOR (OPTIONAL FEATURE)

EC motor provides high efficiency and precise airflow control in a 42 frame package. These motor are coming along with inbuilt internal motor controller and BMS connectivity. Our EC motors are flexible mechanical designs integrates into single or dual blowers as well as fan applications.

Key Features and Benefits:

- Available in single and dual shaft configurations.
- Tri-voltage (one model for multiple applications).
- Multiple input options compatible with a wide variety of control systems.
- Fully programmable to the specific application.
- Integrated motor and control.

Specification:

- Horse Power : 1/4 ~ 1/8 HP
- Voltage : 115 / 230 / 277 V (tri-voltage)
- Speeds : 300-1800 RPM, OR 300-1200 RPM
- Inputs : 0-10V, PWM or 3 - 24V Speed Taps
- Operation Modes : Constant Torque, Constant Speed
- Frame : NEMA[®]† 42
- Enclosure : Open Air Over (OAO)
- Efficiency : Up to 80%
- Mounting : Resilient, Stud or Belly Band

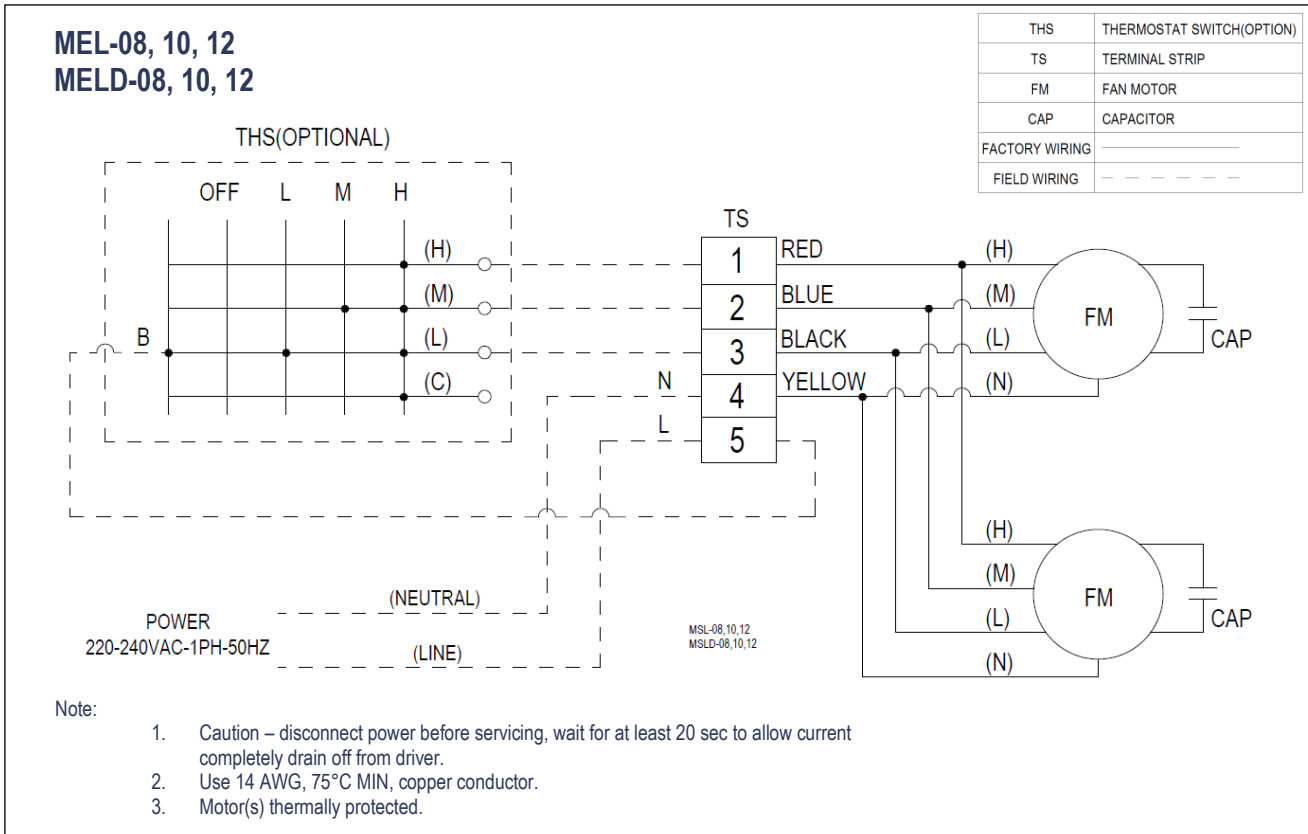

Controller
(Optional)

GUIDE SPECIFICATIONS

FCU GUIDE SPECIFICATIONS

Size Range: 200 to 3000 cfm

PART 1 – GENERAL

1.1 System Description

Horizontal, room fan coil units are to be installed above ceiling for ducting, or with cabinet for exposed Ceiling installations.

1.2 Quality Assurance

- A. Carrier fan coil units are tested in accordance with Eurovent standard.(Refer page no. 4 for Eurovent website link).
- B. Standard insulations are with DCL (Dubai Central Laboratory) conformity mark and complying with BS476 part 6&7 and fire performance tested as per ASTM E84 standards.
- C. Standard fan coil unit is completely insulated in fan section as well as coil section.
- D. Unit cabinet shall be with G90 galvanized steel sheet (0.275 kg of zinc per sq. metre) complying with JIS-G3302 and ASTM A653
- E. Each coil is factory tested for leakage at 350 psig nitrogen pressure with coil submerged in water.
- F. Factory shall be ISO-9001&18001 certified.

1.3 Delivery , Storage and Handling

Each unit is individually packaged from point of manufacture. Units shall be handled and stored in accordance with the manufacturer's instructions.

PART 2 – PRODUCT

2.1 General

Factory assembled, horizontal, blow-through type fan coil unit for exposed ceiling or ducted installations. Units are complete with water coil, fan(s), motor(s), drain pan, filters and all required wiring, collars for ducted units (on the supply side only). Carrier standard fan coil unit casing is manufactured from heavy gauge G90 galvanized steel sheet. Standards unit's inner surfaces for the cooling coil section and entire return air plenum section are insulated with 6mm thick NBR (Nitrile Butadiene Rubber) Electrometric closed cell Foam insulation, 50kg/m³ density. The drain pan is

polyester powder coated on both sides & insulated outside with 3mm thick NBR insulation. Standard insulation is highly flexible, closed cell insulation material with high water vapor diffusion resistance and low thermal conductivity.

2.2 MEL / MELD–Low Static Ducted Units & MEH / MEHD–High Static Ducted Units

Carrier standard low static ducted units are with factory installed plenum section and cleanable aluminum mesh filter. Units are equipped with removable panels to access the fan motor assemblies easily. Standards ducted unit's inner surfaces for the cooling coil section and entire return air plenum section are insulated with NBR Elastomeric closed cell Foam insulation, 50kg/m³ density and drain pan is polyester powder coated on both sides & insulated outside.

2.3 MEL / MELD–Decorative Units & MEH / MEHD–Decorative Units

Carrier standard decorative units are with factory installed plenum section and cleanable aluminum mesh filter. Units are equipped with removable panels to access the fan motor assemblies easily. Standard decorative exposed unit's inner surfaces for the cooling coil section and entire return air cabinet section are insulated with NBR Elastomeric closed cell Foam insulation, 50kg/m³ density and drain pan is polyester powder coated on both sides & insulated outside. Standard decorative exposed units are with removable type double deflection supply air grill, complete unit (RAL9002) and grill (RAL9016) is polyester powder coated.

2.4 MEL / MELD–Low Static Double Skin Ducted Units & MEH / MEHD–Low Static Double Skin Ducted Units

Carrier standard low static double skin ducted units are with factory installed plenum section and cleanable aluminum mesh filter. Units are equipped with removable panels to access the fan motor assemblies easily. Standards double skin unit's cooling coil section and entire return air plenum section are insulated with NBR Elastomeric closed cell Foam insulation, 50kg/m³ density and drain pan is polyester powder coated on both sides & insulated outside. Unit Insulations are stacked between inner & outer galvanized steel panels.

2.5 Fan

Standard units are with direct driven double width fan wheels with forward curved blades are statically and dynamically balanced. Fan scrolls and wheels are constructed of galvanized steel.

2.6 Coils

Standard FCUs are equipped with a 4-row coil for installation in a 2 pipe system. All coils are with 9.52mm seamless copper tubes and aluminum fins. Coil fins are mechanically bonded to copper pipes. Each coil shall have a manual air vent (for ducted units only) and threaded connections for easy field piping. All coils are tested with Nitrogen (N2) pressure at 350psi (2413 kpa) submerged in water and working pressure is 250psi (1724 kpa)

2.7 Operating Characteristics

Fan coil units installed in a 2-pipe system shall be capable of providing cooling as determined by the operating mode of the central water supply system.

2.8 Electrical Requirements

Standard unit are operates on 220/240V, single phase, 50Hz electric power. All internal wirings are done in flexible conduit.

2.9 Motor (s)

Fan motors are 3-speed, 220/240V, and single phase, 50Hz, Class B, Permanent Split Capacitor, & Lubricated Ball Bearing.

The fan motor(s) shall be equipped with integral Automatic temperature reset for motor protection.

Controller
(Optional)

Electronically Commutated Motor (ECM) is available for all sizes as Optional feature.

2.10 Filter

The filters are factory installed aluminum mesh type, permanent, washable and 25 mm thick G2 class as standard. Filter is provided with lifting latches on both the sides of filter frame for easy access from rear side as standard. (Lift and pull). Optionally bottom removal filters can be provided on request. Please confirm while ordering.
